Q: How to get output of the current function as a string using Delphi XE5 and Firemonkey? Is there a possibility to get the current string (text) returned from an ActiveX function (method)? Example (imported samplecode): //Main (TComponent) procedure TForm1.Button1Click(Sender: TObject); var Result: string; begin Result := TMyFunction(); ShowMessage(Result); end; //MyComponent.pas procedure TMyComponent.DoSomething; a: string; a := "; // Case: 10-60592 Document:
