About This Game

[Get fsck-ed with Hacker's Beat!](#)

2016/Jun/17: EDIT mode fixed + New songs!

EDIT mode bug fix is done.
Also "Doodle Ninja" and "Croixleur Sigma" songs are added!

2016/May/24: EDIT mode!

We implemented an "EDIT mode" so that you can import your song and create your own game!

Also, a manual for the EDIT mode is available from "View the Manual" at the right of this store page, or from the Steam client.

Important notice:

- Make sure to place your song file inside the "wav" folder of the local game folders:
C:\Program Files\Steam\steamapps\common\Hacker's Beat\Edit\wav
- Only wav format is usable
- Only the songs shorter than 3mins are usable

Songs which fulfill above 3 will be loaded in your song list of the EDIT mode.

Once you place the song, there are two types to make you own game; place each notes one by one manually, and place the notes by typing while you play (You cannot place the long-notes in the latter method).

We recommend you to put the notes by typing at first, then edit them later to fix the position or add the long-notes.
You can change the position of those notes later.

Of course you can play your own song, but moreover, you can share your newly created songs with friends! (You cannot share the music data hoever)

To share, you need to save the project and EXPORT it.

Please see a manual for more information.

Game Concept: Rhythm Game + Hacker Theme

I'm sure you've experienced this at some point... You're tapping away at your keyboard at a blistering pace, the clattering of the regular keys intermittently interrupted by the nuanced sound of the Enter key.

Play out your dangerous hacker fantasies with this clever rhythm game.

It's easy enough to get the hang of. All you have to do is hit the "notes" that appear on-screen in the general area of the keyboard that it corresponds to.

Just in the general vicinity is close enough, so rhythm ends up being more important than accuracy.

Welcome, to the Hacker's World...

The logo for "Developer's Voice" features the text in a bold, white, sans-serif font. The text is set against a dark background with a complex, glowing network of red and blue lines, resembling a circuit board or a data network. The logo is framed by a dark border with a slight gradient.

Developer's Voice

We started off by researching music games, and found the most important thing that makes music games fun is hitting the right button at the right time, timing your hits to the rhythm of the music.

Next, we went to Japanese video arcades and examined actual music game machines. A commonality between these games was that they came off as looking incredibly difficult, but as a result also really intriguing.

Timing your hits with the music's rhythm and the perceived difficulty level are the main attractors. We incorporated these two points into a "hacker" theme and made it so that the hits don't need to be as precise.

We combined "hacking" and "music" games into a single: Hacker's Beat.

Title: Hacker's Beat
Genre: Casual, Indie
Developer:
TEAM TANDS PLUS
Publisher:
AGM PLAYISM
Franchise:
PLAYISM
Release Date: 15 Sep, 2015

b4d347fde0

Minimum:

OS: Windows XP / Vista / 7 / 8

Processor: Intel Core 2 Duo 2GHz or higher

Memory: 1 MB RAM

Graphics: Direct X 9.0 compliant video card

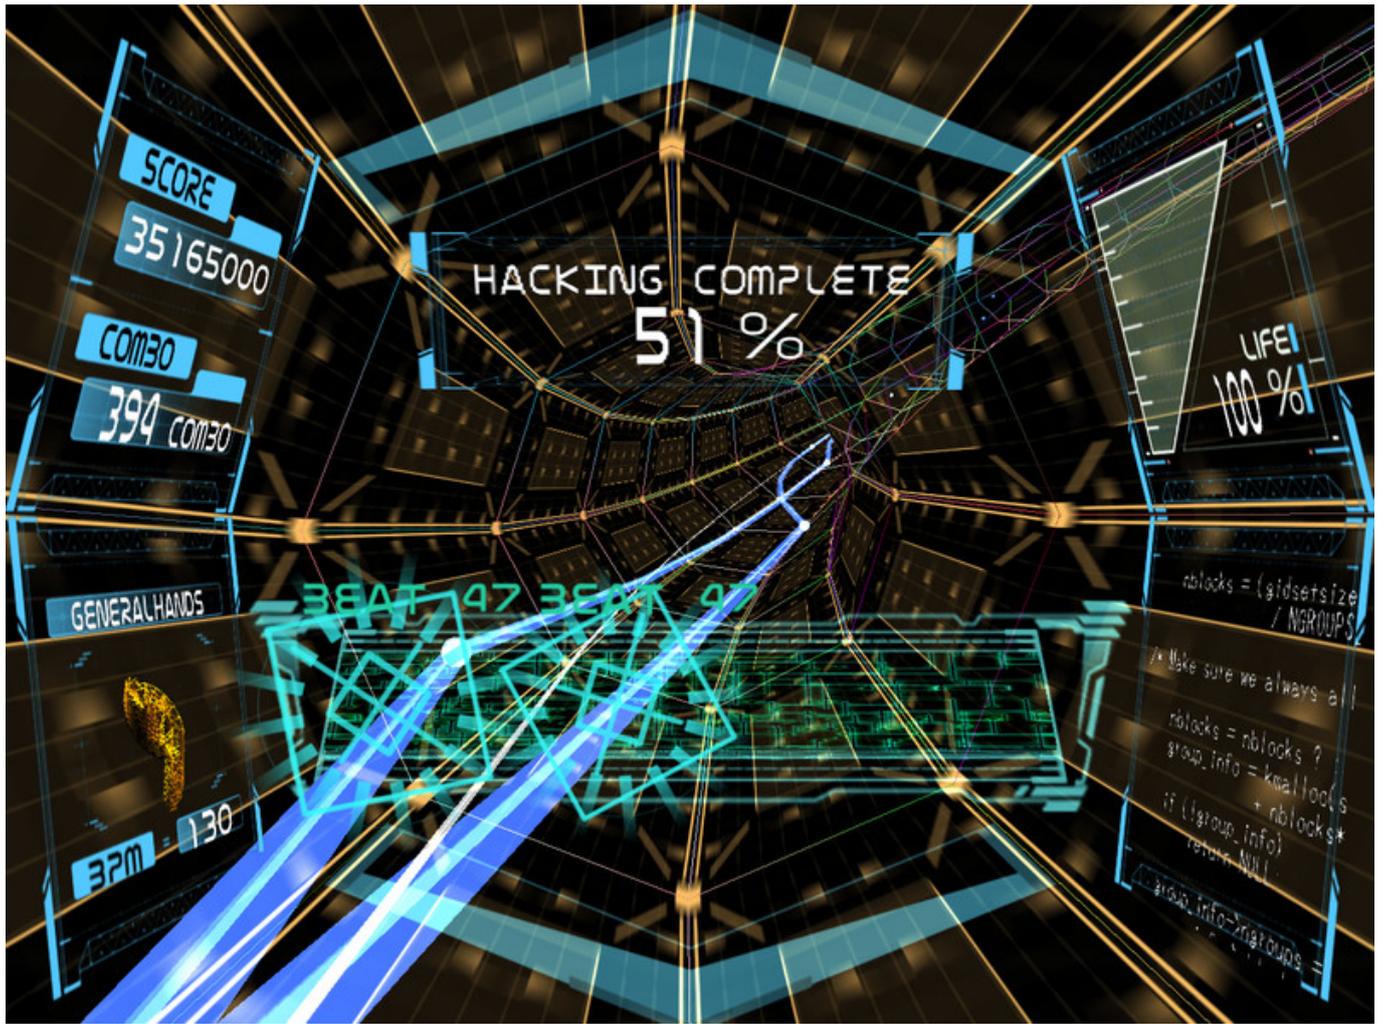

DirectX: Version 9.0

Storage: 500 MB available space

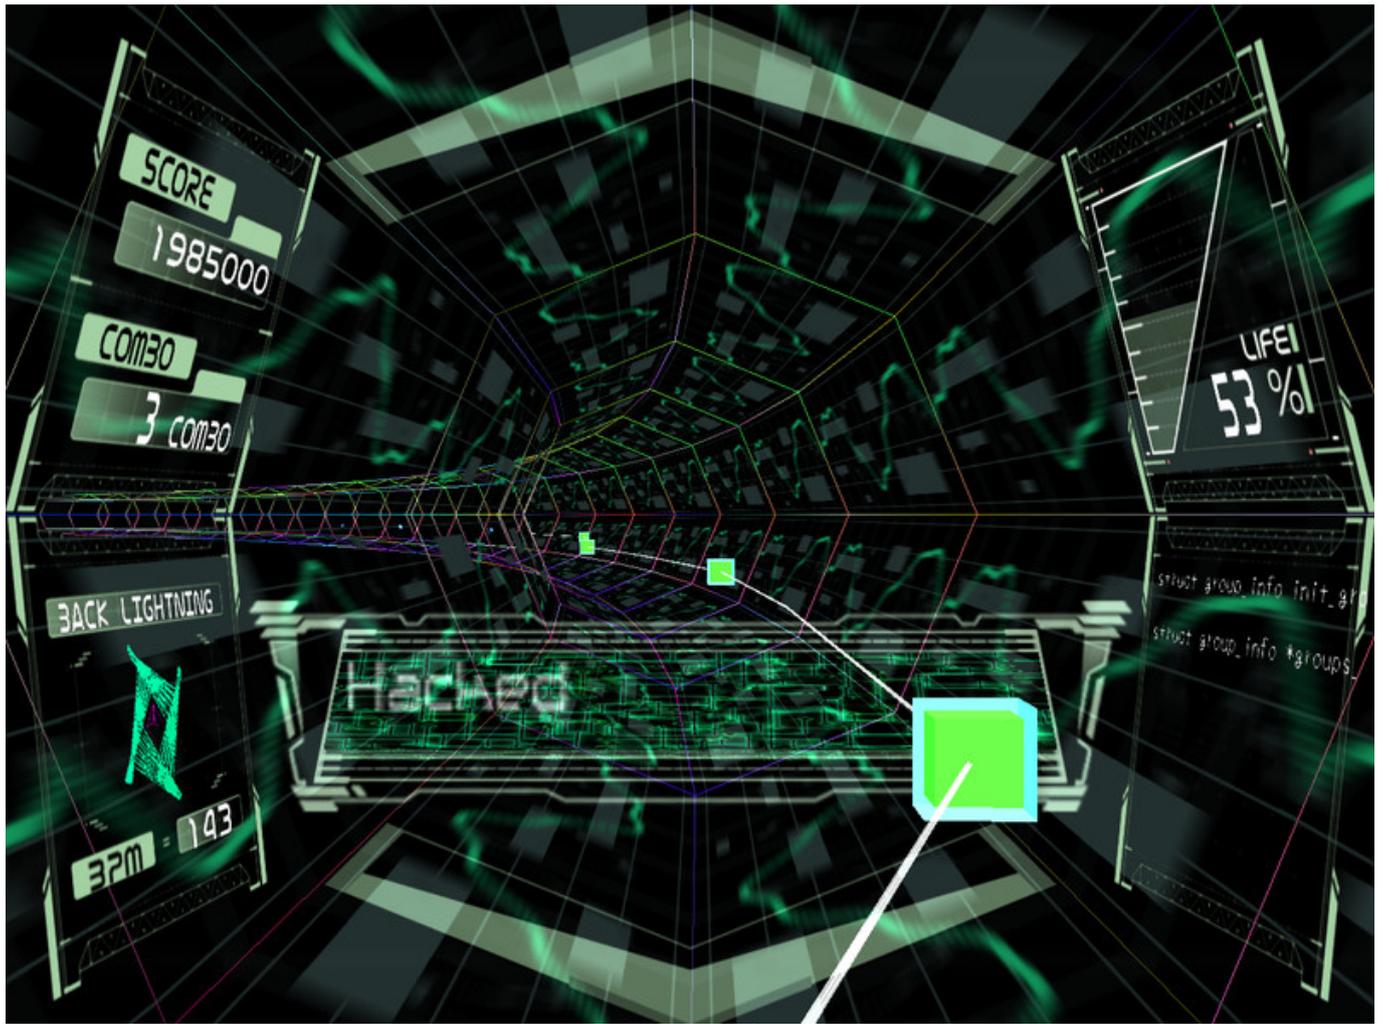

Sound Card: -

Additional Notes: -

English,Japanese

Edit: just spelling.

I love rhythm games, as a genre, and hacking is a fun theme, so this was a big disappointment.

In this game, there's nothing like hacking at all, except the graphics are stylized like wireframe 3d animation garbage from the movie Hackers. I could understand and forgive that since it'd be hard to work much more complexity into a game while you're trying to handle the high speed beats at the same time, but that part's not good either!

3 types of beats:

blocks: You just hit a random keyboard button on the approximate area of the screen the blocks appear on, in time.

lines: SMASH THE KEYBOARD RAPIDLY in the approximate keyboard region the line's on

enter: press enter at the right time

The different songs have a difficulty rating. Lowest I found was 0, which must mean that a value was mistakenly not assigned, because it was hard\fast as hell. Next lowest - there were 2 songs with a level of 5, still quite difficult.

My biggest gripe is that the notes don't actually seem to "want" you to press them in time with the music properly, or at least it was difficult to figure out because was no obvious cue. No audio feedback, and nothing like a combo readout, or DDR's Excellent, Great, Good, Miss etc.

I got this on sale for ~2.50 and wouldn't recommend even spending that much.
